# How does it work?

**Our solution enhances accessibility, collaboration, and efficiency, eliminating the need for extensive IT support and infrastructure.**

**Assemble workflows right in your browser:**

By leveraging browser-based tools, organizations can reduce the costs associated with software deployment, maintenance, and updates. This ensures that users can create and manage workflows regardless of whether they are using Windows, macOS, Linux, or any other supported platform. Allows users to access and manage their workflows from any device with internet access. This flexibility is crucial for individuals who work across multiple devices or in various locations.

**Set triggers and conditions:**

Setting triggers and conditions in iPaaS integration is about defining when and under what circumstances your workflows should execute. This flexibility allows you to create intelligent and responsive integrations that align with your business processes.

**Run workflows in a cloud:**

You can easily integrate with cloud services, enabling users to store and retrieve data from the cloud, creating the ability to edit workflows in real-time fosters a collaborative environment.

## Why **integrate systems online?**

Quick path to value - build workflows online in minutes

No desktop component or virtual machine needed to execute automation

Very simple no-code step by step interface

150+ Integrations
